2025 Sustainability Report

PETROBRAS

1 HIGHLIGHTS 02

2 REDUCING CARBON FOOTPRINT 06

3 ACTING WITH INTEGRITY 11

4 PROTECTING THE ENVIRONMENT 17

5 CARING FOR PEOPLE 32

Reducing carbon footprint[1]

Disclosure	Emission metrics	Unit of measure	2021	2022	2023	2024	2025	Target	Target year
GRI 11.1.5 GRI 11.1.6 SASB EM-EP-110a.1 SASB EM-MD-110a.1 SASB EM-RM-110a.1	Operational absolute emissions - direct (scope 1) and indirect (scope 2) greenhouse gases (GHG) emissions[2]	million tCO_2e	62	48	46	47	**50**	55	2030
SASB EM-EP-110a.2	Routine flaring[3]	million m^3	5	59	150	120	**103**	0	2030
-	CO_2 reinjection in CCUS projects (accumulated)	million tCO_2	30.1	40.8	53.7	67.9	**87.5**	80.0	2025
GRI 11.1.8	GHG intensity in E&P segment[4]	$kgCO_2e$/boe	15.7	15.0	14.2	14.8	**14.7**	15.0	2030
GRI 11.1.8	GHG intensity in refining segment[5]	$kgCO_2e$/CWT	39.7	37.9	36.8	36.2	**36.7**	30.0	2030
-	Upstream methane emissions intensity	tCH_4/thousand tHC	0.32	0.25	0.22	0.20	**0.23**	0.20	2030

1 Our emissions inventory is prepared according to the technical specifications of the Brazilian GHG Protocol Program, in alignment with the guidelines of the standard "A Corporate Accounting and Reporting Standard (GHG Protocol)" of the Greenhouse Gas Protocol, developed by the World Resources Institute (WRI) and the World Business Council for Sustainable Development (WBCSD), and with the specific guidelines published by the International Petroleum Industry Environmental Conservation Association (Ipieca) in the Petroleum Industry Guidelines for Reporting Greenhouse Gas Emissions. We have a proprietary software, the Air Emissions Management System (SIGEA®). This computerized system consolidates our inventory through the monthly processing of information from approximately 7,000 sources. Emissions calculations are based on international references, such as the American Petroleum Institute Compendium, the U.S. Environmental Protection Agency's Compilation of Air Pollutant Emission Factors (US-EPA AP-42), and the Brazilian GHG Protocol Program calculation tools.
a) Emissions throughout the period relate to E&P, refining, fertilizers, petrochemical, electric power generation, land transport (pipeline and road) and maritime operations, as well as distribution activities in Brazil, Argentina, Bolivia, Colombia, United States, Mexico, Paraguay, and Peru. The scope of activity types and operating countries may vary over the years according to our portfolio management.
b) The CO_2 equivalent emissions of the indicators related to the commitments were calculated based on the Global Warming Potential (GWP) values of the fourth Assessment Report of the IPCC – Intergovernmental Panel on Climate Change (AR4), while other values reported for the year 2025 were calculated based on AR5.
c) Possible changes in historical numerical information, regarding previous publications of the 2025 Sustainability Report, are due to improvements in the atmospheric emissions management system or to recommendations arising from the third-party verification process.
d) Biogenic CO_2 emissions are not representative in our inventory.

2 The values refer to total operational emissions, without considering the use of carbon credits to offset GHG emissions of Petrobras Podium Carbono Neutro gasoline calculated through Life Cycle Assessment (LCA). Of the emissions offset in 2025, approximately 36.3 thousand tCO_2e refer to operational emissions.

3 The increase in values between 2021 and 2023 is due to the review and optimization of flaring classifications between 2022 and 2023. Throughout 2022, we improved the identification of flaring causes, in order to classify the entirety of our flaring volume into the categories of routine flare, non-routine flare, and safety flare. In 2023, we achieved 100% classification.

4 Includes scope 1 and 2 emissions and the gases CO_2, CH_4, N_2O, HFCs and SF6.

5 The $kgCO_2e$/CWT indicator uses the activity unit called CWT (Complexity Weighted Tonne), which considers both the effect of processed throughput and the complexity of each refinery, allowing comparison of GHG emissions potential among refineries with different profiles and sizes. Includes scope 1 and 2 emissions and the gases CO_2, CH_4, N_2O, HFCs and SF6.

Protecting the environment

Disclosure	Biodiversity, water, and waste metrics	Unit of measure	2021	2022	2023	2024	2025	Target	Target year

1 The commitment to prepare biodiversity action plans (PABs) has national scope and considers facilities operated by Petrobras, as well as facilities operated by Transpetro and Petrobras Biocombustível.

2 Cumulative result of projects in force in 2025.

3 Area directly worked on by voluntary environmental projects in restoration, productive reconversion, and direct conservation actions, such as sustainable management. Cumulative result of projects in force in 2025.

4 Size of protected areas whose voluntary environmental project actions contribute to the strengthening of their management and conservation, especially Indigenous Lands and Quilombola Territories. Cumulative result of projects in force in 2025.

5 Volumes of oil and oil products spilled related to our operation (does not include clandestine tappings) that individually account for a spilled volume above one barrel (0.159 m³) and that have reached water bodies or non-waterproofed soil. The data include Petrobras parent company, Petrobras Bolivia (PEB), Petrobras International Braspetro - Colombia Branch (PIB-COL) and Transpetro. The targets correspond to the maximum admissible limit.

6 The spilled volume in 2024 was revised from 14.4 m³ to 17.1 m³ due to an update in the estimated spilled volume related to an incident in the Santos Basin, based on the conclusions of the accident investigation. No significant environmental impacts were identified in sensitive areas.

7 The data cover Petrobras parent company; the Brazilian subsidiaries Transpetro, Petrobras Biocombustível, Termobahia, Termomacaé and Transbel; exploration and production activities in the Tupi, Sapinhoá, Iara, Mero and Roncador fields/areas; and international operations at Petrobras Bolívia (PEB), Petrobras International Braspetro - Colombia Branch (PIB-COL) and Petrobras Colombia Combustibles S.A. (PECOCO). Data from other thermoelectric plants are included in the parent company's scope. Does not consider open-circuit cooling freshwater (2,862 megaliters in 2025) and rainwater harvesting (2,339 megaliters in 2025). The figure presented for 2025 considers the scope of the Water Sustainability Commitment (2021 base year). Business segments that were not part of the company's portfolio in 2021 (Fertilizers and BioQAV) are not included in such scope.

8 The data include Petrobras parent company and the companies Transpetro, Petrobras Biocombustíveis and Petrobras Colombia Combustibles (PECOCO).

9 Total mass of hazardous/non-hazardous waste disposed of in RRR routes (Reuse, Recycling, and Recovery) divided by the total mass of hazardous/non-hazardous waste disposed of.

10 Until 2021, the number only referred to the parent company.

Caring for people

Disclosure	Social metrics	Unit of measure	2021	2022	2023	2024	2025	Target	Target year

1 The calculated figures correspond to employees registered in the system under the regime on 12/31/2025, posted in equivalent regions, therefore not considering hiring or dismissal fluctuations, since it is company profile data on a specific date and not an average for the period. The Executive Board members (Executive Directors and CEO) are governed by the company's bylaws and also by the Brazilian Corporations Law, and are not subject to CLT (Consolidated Labor Laws). Does not include Transbel data.

2 The participants of Petrobras' Student Internship Program and the Young Apprentice Program are not counted as non-employee workers.

3 Considers management positions comprising: coordinator, sectoral manager, manager, general manager, assistant, executive manager, Executive Directors and CEO. Does not include employees of contractor companies working at the company's facilities.

4 Self-declared employees of Black or brown color/race.

5 The 2025 data include Petrobras parent company, Petrobras Bolívia S.A. (PEB), Petrobras International Braspetro B.V. - Colombia Branch (PIB-COL), Transpetro, Petrobras Colombia Combustibles S.A. (PECOCO), Termomacaé, Termobahia, Petrobras Operaciones S.A. (POSA) and Petrobras Logística de Exploração e Produção (PB-LOG).

6 Data from Petrobras parent company, Petrobras Bolívia S.A. (PEB), Petrobras International Braspetro-Colombia Branch (PIB-COL), Transpetro, Petrobras Operaciones S.A. (POSA), Petrobras Colombia Combustibles (PECOCO), Termomacaé, Termobahia, and Petrobras Logística de Exploração e Produção S.A. (PB-LOG). Number of recordable injuries per million man-hours of risk exposure. Includes typical cases of non-lost-time injuries (excluding first-aid cases), lost-time injuries, occupational disease cases, and fatalities.

7 Until 2021, the number only referred to the parent company.

8 Data from Petrobras parent company.

9 The value considers the cumulative average of projects measured from 2019 onwards (total of generated value/total investment).

10 The presented data is rounded to thousandlions of Brazilian Reais (BRL), without decimal places. The 2025 value corresponds to precisely BRL 4,745,130.12.

Acting with integrity

1 Our emissions inventory is prepared according to the technical specifications of the Brazilian GHG Protocol Program, in alignment with the guidelines of the "A Corporate Accounting and Reporting Standard (GHG Protocol)" of the Greenhouse Gas Protocol, developed by the World Resources Institute (WRI) and the World Business Council for Sustainable Development (WBCSD), and with the specific guidelines published by the International Petroleum Industry Environmental Conservation Association (Ipieca) in the Petroleum Industry Guidelines for Reporting Greenhouse Gas Emissions. We have a proprietary software, the Air Emissions Management System (SIGEA®). This computerized system consolidates our inventory through the monthly processing of information from approximately 7,000 sources. Emissions calculations are based on international references, such as the American Petroleum Institute Compendium, the U.S. Environmental Protection Agency's Compilation of Air Pollutant Emission Factors (US-EPA AP-42), and the Brazilian GHG Protocol Program calculation tools.
a) Emissions throughout the period relate to E&P, refining, fertilizers, petrochemical, electric power generation, land transport (pipeline and road) and maritime operations, as well as distribution activities in Brazil, Argentina, Bolivia, Colombia, United States, Mexico, Paraguay, and Peru. The scope of activity types and operating countries may vary over the years according to our portfolio management.
b) The CO_2 equivalent emissions of the indicators related to the commitments were calculated based on the Global Warming Potential (GWP) values of the fourth Assessment Report of the IPCC – Intergovernmental Panel on Climate Change (AR4), while other values reported for the year 2025 were calculated based on AR5.
c) Possible changes in historical numerical information, regarding previous publications of the 2025 Sustainability Report, are due to improvements in the atmospheric emissions management system or to recommendations arising from the third-party verification process.
d) Biogenic CO_2 emissions are not representative in our inventory.

2 Reduction compared to 2015. Although the 2025 values are presented in AR5, the reduction was calculated using the 2025 CO_2e value in AR4, so that it could be compared with the 2015 figure, which was calculated on the same basis.

3 The 2025 figures refer to the main emissions in our value chain and do not consider the use of carbon credits to offset GHG emissions of Petrobras Podium Carbono Neutro gasoline, calculated based on LCA, which totaled 297.9 thousand tCO_2e in 2025.

4 Includes HFCs and SF6 gases. PFC and NF3 emissions were not identified in our activities.

5 Includes gas treatment units, LNG terminals, maritime transport, gas transport activities (Transpetro and Transportadora Brasileira Gasoduto Bolívia-Brasil - TBG), Petrobras administrative activities, as well as operational activities not previously described: Petrobras Biocombustível; Fertilizers (until 2020); Liquigás (until 2019); and Petrobras Distribuidora (until 2018).

6 a) We consider the records of combusted hydrocarbons volume in activities, while they are part of our portfolio, of exploration and production, refining, fertilizer production, gas treatment and transport.
b) We consider records of vented emissions directly into the atmosphere through venting and depressurization events (does not include losses from fugitive emissions in line and equipment components).
c) Approximately 99.7% of combusted hydrocarbons volume occurs in Brazil.

Air emissions

1 Our emissions inventory is prepared according to the technical specifications of the Brazilian GHG Protocol Program, in alignment with the guidelines of the "A Corporate Accounting and Reporting Standard (GHG Protocol)" of the Greenhouse Gas Protocol - A Corporate Accounting and Reporting Standard (GHG Protocol), developed by the World Resources Institute (WRI) and the World Business Council for Sustainable Development (WBCSD), and with the specific guidelines published by the International Petroleum Industry Environmental Conservation Association (Ipieca) in the Petroleum Industry Guidelines for Reporting Greenhouse Gas Emissions. We have a proprietary software, the Atmospheric Emissions Management System (SIGEA®). This computerized system consolidates our inventory through the monthly processing of information from approximately 10,000 sources. Emissions calculations are based on international references, such as the American Petroleum Institute Compendium, the U.S. Environmental Protection Agency's Compilation of Air Pollutant Emission Factors (US-EPA AP-42), and the Brazilian GHG Protocol Program calculation tools. HAP and H_2S gases are not inventoried by Petrobras.

2 In 2025, a methodological update was adopted in the estimation of VOC emissions. The use of standardized emission factors was replaced by process simulations, resulting in a more accurate estimate that is more representative of actual operating conditions. Therefore, comparisons between 2025 data and previous years should take this methodological change into account.

GRI 11.1.3	Total energy consumption outside of the organization	millions TJ	5.7	5.9	6.0	5.9	5.6	6.2

Disclosure	Energy intensity	Unit of measure	2020	2021	2022	2023	2024	2025
GRI 11.1.4	Energy Intensity Index e Energy Sustainable Index (ESI)[3]	-	115.1	113.1	107.5	103.7	102.6	98.5

1 a) The consolidation of internal energy consumption follows the approach and standards adopted for our emissions inventory, including the organizational boundary envelope and the direct and indirect operations boundaries included.
b) The mass or volume values of fuel consumption consumed are converted to energy considering the calorific value values by fuel type. Electricity and steam are accounted for based on the theoretical thermal equivalent (0.0036 TJ = 1 MWh).
c) The reported consumption of renewable fuels refers almost entirely to the use of bio-bunker fuel by Transpetro.
d) The reported fuel consumption covers all those necessary for our various operations, including: generation of electric power and steam for internal use, internal heating and cooling streams, transport, processes, among others.
e) The volume of natural gas and liquid fuels flared, in 2025, totaled 70.6 thousand TJ and is not considered in the calculation of energy consumption.

2 We do not sell energy of the "heating" and "cooling" types. The energy sales volumes are those of the Free Trading Environment (ACL) and Regulated Trading Environment (ACR) of the thermoelectric plants that we effectively control and are the same as already reported to the market through the Form 20-F (filed with the U.S. Securities and Exchange Commission - SEC) and Reference Form (filed with the Brazilian Securities and Exchange Commission - CVM) converted by the 3,600 factor in the transformation of MWh to Joule. Steam volumes for 2021 were revised to consider steam sales to third-party refineries.

3 Starting in 2025, we have adopted the Energy Sustainability Index (ESI), which indicates the quality of energy consumption in refining business units, considering the carbon footprint of purchased energy (electricity and steam purchases). The ESI recognizes the impact of these low-carbon-intensity energy sources without losing sight of the consumption-side efficiency of refinery process units, which is fundamental for long-term carbon reduction worldwide. The indicator was developed by Solomon Associates, known as ESI (Energy Sustainability Index).

Anti-corruption[1]

Disclosure	Processes related to corruption	Unit of measure	2025
GRI 11.20.2	Processes assessed for risks related to corruption	%	100

Disclosure	Anti-corruption policies[2]	Unit of measure	2025

GRI 11.20.3	Employees in other positions with additional payment (includes supervisor and specialist positions) who received anti-corruption training in 2025	%	99.58
GRI 11.20.3	Employees without additional payment who have been informed about the anti-corruption policies and procedures adopted by the organization	%	97.61
GRI 11.20.3	Employees without positions with additional payment (includes supervisor and specialist positions) who received anti-corruption training in 2025	%	97.61
GRI 11.20.3	Business partners who have been informed about the anti-corruption policies and procedures adopted by the organization	%	100

1 Data from the parent company only.

2 For the purposes of compliance with the indicator, we consider formal training related to the prevention and combat of fraud and corruption as the main vehicle for active communication of policies and guidelines on the subject within the company. The training process, in addition to promoting structured dissemination of the content, formalizes the acknowledgment of integrity guidelines by the trained audience. Additionally, the policies and guidelines are permanently available for consultation on the company's internal network.

Diversity in governance bodies

Disclosure	Composition in the Board of Directors, committees, Executive Board, and Fiscal Council[1]	Unit of measure	2025	Target	Target year
-	Petrobras seats on the Board of Directors, advisory committees, Executive Board, and Fiscal Council of its holdings occupied by women	%	49	30	2026
-	Petrobras seats on the Board of Directors, Executive Board, and Fiscal Council occupied by self-declared Black persons	%	28	20	2028

Compliance with laws and regulations

Disclosure	Compliance with laws and regulations[2]	Unit of measure	Number of cases	Value
GRI 2-27	Significant non-compliance cases in which fines were applied	cases million BRL	3	14.56

Anti-harassment

Disclosure	Harassment complaints	Unit of measure	2025	Target	Target year
-	Number of sexual violence complaints[3]	cases	169	-	-
-	Average period for investigating sexual violence complaints[4]	days	61	60	2030

1 The gender and race diversity percentage considered by the company for commitment purposes, as disclosed in its 2026-2030 Business Plan, considers only Petrobras nominees.

2 Data from Petrobras parent company.

3 The number of sexual violence complaints considers complaints received during the year.

4 Average investigation time for sexual violence complaints considers complaints closed during the year.

Supplier integrity[1]

Disclosure	Integrity and/or privacy training	Unit of measure	2025	Target	Target year
-	Relevant suppliers trained on integrity and/or privacy[2]	%	56	100	2030

Disclosure	Human rights due diligence	Unit of measure	2025	Target	Target year
-	Relevant suppliers that underwent implemented human rights due diligence[2]	%	37	100	2030

Disclosure	Strategic contracting	Unit of measure	2025	Target	Target year
-	Strategic contracting with expansion of ESG requirements[3]	%	74	100	2028

Disclosure	Greenhouse gas (GHG) emissions	Unit of measure	2025	Target	Target year
-	Relevant suppliers that published their GHG emissions inventory[2]	%	53	70	2028

1 Data from Petrobras parent company.

2 Relevant suppliers are those that play a significant role in our supply chain, with notable representation in contractual balance and in potential environmental, social, and governance (ESG) impacts in the supply of goods and services to the company.

3 Strategic categories are categories of goods or services with high supply value, high technological content, and significant influence on our performance.

–	Brackish/saline (salinity > 0.5‰)[3]	megaliters	0	0
–	**Total**	**megaliters**	**3,725,419**	**7**

1 The data cover Petrobras parent company; the Brazilian subsidiaries Transpetro, Petrobras Biocombustível, Termobahia, Termomacaé and Transbel; exploration and production activities in the Tupi, Sapinhoá, Iara, Mero and Roncador fields/areas; and international operations at Petrobras Bolívia (PEB), Petrobras International Braspetro – Colombia Branch (PIB-COL) and Petrobras Colombia Combustibles S.A. (PECOCO). Data from other thermoelectric plants are included in the parent company's scope. Does not consider open-circuit cooling freshwater (2,862 megaliters in 2025) and rainwater harvesting (2,339 megaliters in 2025).

2 Water stress according to the World Resources Institute "Aqueduct Water Risk Atlas" criterion: baseline water stress (ratio between annual total water demand and annual available renewable water supply) high (40-80%) or extremely high (> 80%).

3 Although GRI requires the division of withdrawals into "freshwater" (≤ 1,000 mg/L total dissolved solids) and "other water" (> 1,000 mg/L total dissolved solids), we have chosen to follow the criterion for separating freshwater from brackish/saline water adopted in Brazil under CONAMA Resolution No. 357/2005.

4 Produced water generation values are estimated based on the BSW (Basic Sediments and Water) of the producing wells.

5 Due to our calculation methodology, when one of our facilities receives from another of our own facilities or from a Petrobras-controlled company, this is recorded as "third-party receipt".

6 GRI requires a breakdown of "Third-party Water in Water-Stressed Areas" (7 megaliters) by the original source typology of the suppliers' withdrawal. Our best estimate is that 52% of this volume comes from freshwater surface sources and 48% from freshwater groundwater sources.

Water and effluents (continued)

Disclosure	Total water/effluents discharge by destination[1]	Unit of measure	All areas	Water stressed areas[2]
GRI 11.6.5	**Total discharge**	**megaliters**	**3,674,134**	**61**
GRI 11.6.5	to surface water source	megaliters	66,864	55
GRI 11.6.5	to groundwater source[4]	megaliters	242,917	6
GRI 11.6.5	to sea	megaliters	3,363,853	0
GRI 11.6.5	for third-party use (total)	megaliters	501	0
GRI 11.6.5	for third-party use (reuse)	megaliters	12	0

Disclosure	Freshwater use and water reuse/recycling[3]	Unit of measure	All areas	Water stressed areas[2]
SASB EM-EP-140a.1 **SASB EM-RM 140a.1**	**Total demand (withdrawal + reuse/recycling)**	**megaliters**	**152,308**	**7**
SASB EM-EP-140a.1	Upstream	megaliters	22,948	0
SASB EM-RM 140a.1	Downstream	megaliters	120,999	0
SASB EM-RM 140a.1	Midstream	megaliters	989	7
-	Other	megaliters	7,372	0

1 The data cover Petrobras parent company; the Brazilian subsidiaries Transpetro, Petrobras Biocombustível, Termobahia, Termomacaé and Transbel; exploration and production activities in the Tupi, Sapinhoá, Iara, Mero and Roncador fields/areas; and international operations at Petrobras Bolívia (PEB), Petrobras International Braspetro - Colombia Branch (PIB-COL) and Petrobras Colombia Combustibles S.A. (PECOCO). Data from other thermoelectric plants are included in the parent company's scope. The figures include open-circuit cooling water.

2 Water stress according to the World Resources Institute "Aqueduct Water Risk Atlas" criterion: baseline water stress (ratio between annual total water demand and annual available renewable water supply) high (40-80%) or extremely high (> 80%).

3 The data cover Petrobras parent company; the Brazilian subsidiaries Transpetro, Petrobras Biocombustível, Termobahia, Termomacaé and Transbel; exploration and production activities in the Tupi, Sapinhoá, Iara, Mero and Roncador fields/areas; and international operations at Petrobras Bolívia (PEB), Petrobras International Braspetro - Colombia Branch (PIB-COL) and Petrobras Colombia Combustibles S.A. (PECOCO). Data from other thermoelectric plants are included in the parent company's scope. The freshwater withdrawal values presented do not include open-circuit cooling water (2,862 megaliters) and rainwater harvesting (2,339 megaliters). Regarding reuse: (a) Condensate recovered in thermal cycles and recirculated cooling water are not considered as such. (b) Includes produced water reinjected for secondary recovery in onshore fields.

4 In alignment with CDP, Water theme, discharges to groundwater sources consider water injected (or produced water reinjected) into oil and gas reservoirs for secondary recovery purposes. Excluding such amounts, the value is 2,712 megaliters.

Oil and oil product spills

Disclosure	Significant spills[1]	Unit of measure	Volume	Location	Material
GRI 11.8.2	**Onshore**	m^3	0.70		
GRI 11.8.2	Petrobras	m^3	0.70	Parque Recife, Pojuca (BA)	Oil
GRI 11.8.2	**Offshore**	**m^3**	**2.30**		
GRI 11.8.2	Petrobras	m^3	0.60	Santos Basin (SP)	Oil
GRI 11.8.2	Petrobras	m^3	0.20	Santos Basin (SP)	Oil
GRI 11.8.2	Petrobras	m^3	1.30	Espírito Santo Basin (ES)	Oil
GRI 11.8.2	Petrobras	m^3	0.20	Santos Basin (SP)	Other

1 Volumes of oil and oil products spilled related to our operation (does not include clandestine tappings) that individually account for a spilled volume above one barrel (0.159 m^3) and that have reached water bodies or non-waterproofed soil. The data include Petrobras parent company, Petrobras Bolivia (PEB), Petrobras International Braspetro - Sucursal Colombia (PIB-COL) and Transpetro.

Process safety

Disclosure	Process safety events[1]	Unit of measure	Quantity

1 The data presented, linked to company units, represent a subset of the total restored areas within the Petrobras system, comprising only those that have already been preliminarily assured (by 03/23/2026) in a process conducted by a third party, considering projects carried out in the last 10 years.

2 The areas linked to the projects are based on data reported by the supported projects and reflect the cumulative effort of implementing area-recovery actions over the history of the initiatives.

Facilities with a Biodiversity Action Plan (BAP)[1]

Disclosure	Country	Units	Location	Activity

1 The BAPs were prepared for all of the company's operational units where potential or actual impacts on biodiversity were identified, in accordance with Petrobras' Manage Biodiversity Risks and Impacts standard and the document "A guide to developing Biodiversity Action Plans" (Ipieca; IOGP, 2023).

2 Comprising more than one unit, considering criteria of geographic proximity or interdependence.

Main drill exercises of 2025

Disclosure	Unit	Month	Description
SASB EM-EP-540a.2 SASB EM-MD-540a.4	Montes Claros Biodiesel Unit (UBMC)	March	Drill exercise abandonment
SASB EM-EP-540a.2 SASB EM-MD-540a.4	Bahia (BA) - Onshore	April	Complete drill exercise (Communication, Tabletop and Field)

1 The calculated figures correspond to employees registered in the system under the regime on December 31, 2025, posted in equivalent regions, therefore not considering hiring or dismissal fluctuations, since it is company profile data on a specific date and not an average for the period. The Executive Board members (Executive Directors and CEO) are governed by the company's bylaws and also by the Brazilian Corporations Law, and are not subject to CLT (Consolidated Labor Laws). Does not include Transbel data.

2 "Other bonus-eligible positions" comprises the supervisor and specialist roles.

3 Only Petrobras parent company and Araucária Nitrogenados S.A. conduct gender identity self-declaration surveys. Other subsidiaries in Brazil and subsidiaries abroad do not yet conduct this survey.

4 Part-time consists of an administrative regime with a reduced workday of 20% or 25%.

5 Data from the parent company only.

6 Percentage of locally hired employees compared to the total number of employees in each category.

7 Araucária Nitrogenados S.A., Termobahia, Termomacaé, Petrobras Logística de Exploração e Produção (PB-LOG), Transpetro International B.V. (TI BV), Petrobras Comercializadora de Gás e Energia e Participações S.A. (PBEN-P) and Petrobras International Braspetro B.V. (PI BV) had no hirings during the period.

8 The rate considers the number of new hires divided by the total number of employees.

9 Voluntary turnover is the proportion of employees who chose to leave the company (such as resignation, retirement, early retirement, etc.) during 2025, expressed as a percentage of the total number of employees on December 31, 2025. Total turnover is the proportion of employees who left the company voluntarily or involuntarily.

10 Return-to-work rate corresponds to the percentage of employees who returned to work after maternity/paternity leave in relation to the number of employees who were expected to return to work after leave.

11 Retention rate corresponds to the percentage of employees retained 12 months after returning to work following maternity/paternity leave in relation to the number of employees who returned from leave in the previous reporting period.

12 Total compensation including all bonuses, but excluding pension benefits and additional benefits. The highest-paid individual at Petrobras parent company is the CEO, and the highest-paid individual at Petrobras and subsidiaries (consolidated) is the CEO of Petrobras parent company.

13 Weighted average between the ratio of the highest to the lowest compensation of each company and its respective headcount, not including employees of contractor companies working for the company.

14 Ratio of the highest compensation of the company to all employees of the same company. Consolidation between companies performed through the weighted average of the number of employees of each company.

15 For calculation purposes, each company calculated the ratio between the percentage increase in the annual total compensation of the highest-paid individual at the company and the average percentage increase of the remaining employees. The consolidation between companies was performed through the weighted average of the ratio measured at each company by its number of employees.

16 In accordance with Guideline 7 of our Human Resources Policy and item 4.2.a of our Code of Ethical Conduct, Petrobras' Career and Compensation Plan (PCR) makes no gender distinction in compensation between men and women who hold the same position or role, and who are at the same salary level and under the same working conditions (work regime – administrative, shift, or on-call). However, the male predominance in special work regimes (shift and on-call) in the oil and gas industry results, overall, within a non-equivalent analysis of positions/roles/salary level/work regime, in a small salary difference. We have a salary table with various basic salary levels, all applicable to both men and women. However, for compensation calculation, both basic salaries and additional payments are considered, such as transportation allowance, childcare allowance, etc.

17 Consolidation between companies performed with a weighted average based on the respective number of employees in each company.

18 The proportion cannot be calculated in cases where there are no men or women in the country within the functional category in question.

19 Unlike what is stated in note [1], for this disclosure, all companies in the system are included.

20 Includes all open complaints, except those in Disciplinary Processing and Integrity Committee.

21 Includes "Cases with reparation plan under implementation" + "Cases with completed reparation plan" + "Cases not subject to corrective measures".

22 Includes complaints in Disciplinary Processing and Integrity Committee (stages following the fact-finding process).

23 Includes all open complaints, except those in Disciplinary Processing and Integrity Committee.

24 No follow-up on result analysis by the Ombudsman.

25 Includes disqualified and unconfirmed complaints.
